

Claim 1 (twice amended). An adhesive tape with adhesive front side and nonadhesive rear side and two long edges for flying reel change, having

a) a film backing (P1) having a front side and a rear side and which is coated on the front side with a self-adhesive composition (N1),

b) part of the nonadhesive rear side of the film backing (P1) being equipped with a double-sided adhesive tape (DO) which is comprised of a cleavable system (P2) coated on both sides with self-adhesive composition (N2, N3), wherein the double-sided adhesive tape (DO) is arranged at a distance (V) of 0-15 mm, from one long edge (LK) of the adhesive tape.

B1
Sub D1

REMARKS

This application pertains to a novel adhesive tape for flying splice; i.e., for flying reel changes.

Claims 1-17 are pending.

Claim 1 has been amended to clarify the structure of the double-sided adhesive tape which is attached to the non-adhesive side of the single-sided adhesive tape.

The claims are directed to an adhesive tape comprised of a film backing having a self-adhesive coating on one side and a non-adhesive rear side. Part of the non-adhesive rear side is provided with a double-sided adhesive tape which itself is formed of a cleavable system coated on both sides with self-adhesive composition.
